

## Investment policy

The fund offers the opportunity to participate directly in the performance of the Central European equity markets. The fund manager uses active portfolio management and analysis to adjust the portfolio composition of the fund to achieve or exceed the benchmark return. In order to achieve its investment objectives, the Fund Manager will allocate a significant part of the Fund's resources (taking into account investment opportunities) to the purchase of shares listed on stock exchanges in Central European countries (Budapest, Bucharest, Warsaw, Prague, Bratislava, Ljubljana, Zagreb and Vienna), but may also purchase shares listed on stock exchanges in other countries. In addition, the portfolio may include bank deposits, investment funds and bonds.

## Recommended for

For those investors with a medium- to long-term horizon who want to achieve a high return in line with a high risk tolerance; those who want to buy a fund with an average of 90% in equities and invest the remaining part mainly in government bonds and discount bonds.

## Investment activity

With the exception of the Austrian bourse, all regional bourses gained in June, the global risk on mood favorably affected our regional stock market as well. The biggest percentage boost is related to the BUX which closed above 72k in June, the highest ever close in its history. The fund will be transformed to an absolute return fund from July therefore its equity exposure was cut for a smooth transition at the end of June.

## Glossary

**Unit Price (Net Asset Value per Unit):** shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

**Settlement:** how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

**Investment period:** the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

**ISIN:** (International Securities Identification Number): a unique international identifier for securities.

**Aggregate risk indicator:** provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

**Net asset value:** the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

**Portfolio:** means the composition and totality of the assets held by investment funds.

**Standard deviation:** the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month .

**Sharpe ratio:** the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

**Max Drawdown Indicator:** Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

## Legal disclaimer
