

Investment policy

The Fund aims to provide its investors an attractive investment alternative with an attractive risk-return profile through an appropriate mix of risky and safe investments. The Fund's objective is to outperform money market funds over a 2-year time horizon, with a higher return than money market funds but lower risk than pure equity funds. The Fund Manager aims to invest the assets of the Fund in a manner that is reasonable in terms of risk and to achieve the highest possible return, in terms of interest, capital gains and dividend income. Within the assets permitted by the Fund's investment policy, the Fund Manager intends to invest primarily in government securities, corporate bonds, equities and exchange traded funds (ETFs), money market instruments and other interest-bearing securities. The Fund Manager may also enter into derivative transactions. The objective of the Fund is capital growth. The Fund has no geographical specification or specific industry exposure.

Recommended for

We recommend the fund to investors with a medium to longer-term horizon and a medium risk tolerance, who would like to achieve a higher return on their invested capital than deposits and money market investments over a 2-year period, but are not sensitive to possible negative returns for a few months, and do not wish to follow the markets on a daily basis and reallocate their savings between lower and higher risk assets, but would prefer to leave this to financial professionals.

Investment activity

The goal of the fund is capital growth, and in order to achieve this, the Fund Manager follows an absolute return strategy. The major part of the fund's portfolio typically includes exposures taking advantage of high short-term domestic interest rates by using derivative instruments., it follows a low-volatility strategy that achieves a higher return than money market returns by covering the currency risk of bonds typically issued in foreign currency and at the same time winning a high carry. We further increased the proportion of regional government securities issued in hard currencies with higher returns, and decreased the short position in US long term yields, and also decreased the HUF short position. Also kept the long TRY position because of the high carry. I bought some Raiffeisen perpetual bond after the recall of the OTP 29.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month .

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.
